

COLOCATION SERVICES

Savvis Colocation Solutions**Savvis Knows Colocation**

Savvis provides comprehensive colocation solutions that enable you to deliver the high level of business efficiency you require, while reducing your costs and increasing your speed to market.

Our IT infrastructure extends around the world, enabling us to conveniently deliver IT services that keep businesses integrated, whether your organization is opening a new office in London or collaborating with a new partner in Tokyo.

We are an innovative global service provider with quality colocation and network leadership, security expertise and outstanding customer support.

Your speed to market can be enhanced by leveraging our gold support and managed services:

- Approximately 2,200 employees with extensive expertise in technical operations, customer support, engineering and consulting
- 31 Global data center locations in North America, Europe and Asia-Pacific, and more than 50 Pops
- Savvis locations are ideal for geographic diversity/redundancy, IT asset protection and equipment failover

Savvis' colocation solutions are built on the following core components:

- Multi-level physical security
- N+1 power infrastructures
- Convenient access to Savvis' MPLS-enabled network and a global network footprint
- 24/7 global support service allows you to deliver a reliable and high quality user experience to customers, employees, partners and investors

Our comprehensive set of data center and network connectivity solutions meet the complex needs of organizations in the financial, high-tech, consumer packaged goods, business services and media and entertainment industries.

Security

Over the years, we have exceeded our clients' expectations regarding security and data center access. Savvis' data centers leverage advanced standards in data center infrastructure, including biometric readers, card scanners and person traps as standard methods to validate legitimate access to our data center infrastructure.

Power Availability

Multiple levels of redundancy are built into our data center infrastructure, helping to protect your power load during potential events. In the event of a power failure, we provide a minimum of N+1 UPS redundancy and generator backup. Static transfer switches also protect your power load during emergencies. With multiple levels of protection built into our data center infrastructure, Savvis provides an enterprise class power availability service level agreement.

Heating, Ventilation & Air Conditioning (HVAC)

Each of Savvis' data centers utilizes:

- High-volume, zoned temperature control systems
- Multiple air conditioning units to dissipate excess heat
- N+1 HVAC units monitored through the building automation system with individual unit failure alarm triggers
- Hot and cold aisle practices to more effectively distribute conditioned air in the raised floor area and conserve precious power resources

Seismic Engineering

All data center equipment racks are anchored to a concrete slab below the raised floor. In seismically-active regions, an additional layer of protection, earthquake bracing minimizes potential movement during seismic events. Savvis takes great care to meet or exceed stringent local building code requirements. In certain locations, seismic isolation equipment is employed to further cushion the potential effects of tremors.

Network Connectivity

By collocating your IT infrastructure at one of Savvis' data centers, you have dedicated access to our Tier 1 IP backbone, one of the largest networks comprising the global Internet. Engineered on our core Application Transport Network (ATN), Savvis' HAN Internet access service offers you high bandwidth Internet connectivity — from 1 megabit to 10 gigabits — right in our secure data centers that were specially designed to support Savvis' customers. The service includes a full complement of port interface speeds and a comprehensive service level agreement that includes 100 percent core network availability.

Each of our data centers also offers connectivity to multiple network carriers, providing you with additional connectivity options that address your organization's specialized requirements. We'd be pleased to provide you with further details about the connectivity options that are available at your local data center.
