

Savvis in Asia-Pacific

Savvis is a global leader in outsourced internet infrastructure services for the enterprise. More than 4,000 customers in Asia-Pacific, North America and Europe, including 40 percent of the top 100 companies in the Fortune 500, use Savvis to reduce capital expense, improve service levels and harness the latest advances in cloud computing.

By outsourcing to Savvis, our customers can focus on their core business while we ensure the quality of their IT infrastructure. Our customers include leading global brands such as Universal Music Group, Thomson Reuters, Allen & Overy LLP and Discovery Communications.

Savvis in Asia-Pacific

Through a global tier-1 network and 28 global data centers we are able to deliver a portfolio of services and solutions suited to the demanding needs of enterprises operating in today's competitive business environment. In the Asia-Pacific Rim, Savvis has data centers in Singapore and Tokyo with further points-of-presence throughout the region.

Our Singapore data center occupies approximately 33,000 sq ft gross and is custom designed with raised floors, HVAC, temperature control systems, minimum N+1 redundant power sources and high capacity cooling zones, smoke detection, fire suppression systems as well as secured biometric access control systems.

Working together with the Infocomm Development Authority of Singapore (IDA)

To compete effectively in today's technology industry, strong vendor relationships and alliances are critical to enhance the industry's offerings to businesses and increase market reach locally, regionally and globally.

To meet the changing and growing market needs, Infocomm Development Authority of Singapore (IDA) introduced the Infocomm Local Industry Upgrading Program (iLIUP). iLIUP promotes strategic, mutually beneficial relationships between infocomm local enterprises (iLEs) and multinational corporations (MNCs) to secure a foothold in the local, regional and global infocomm landscape.

Savvis is one of the MNC participants under the iLIUP program. iLEs that are enrolled with Savvis under the iLIUP program can leverage Savvis' SaaS solution and cloud computing infrastructure to host and deliver their applications.

A leading solution for SaaS providers

Savvis provides a Software-as-a-Service (SaaS) solution that aims to help our customers succeed throughout the entire business lifecycle. With a holistic approach, broad service offering and history of proven SaaS implementations, our SaaS solution is the answer for any business searching for an innovative service provider.

Our total lifecycle services give you the flexibility to continuously develop, integrate, deliver, and operate applications. In the past, you bore the burden of making the initial investment, creating backup and recovery plans, buying servers, building out support teams, and managing complexity. Today, you can shift that burden to Savvis.

We have the proven flexibility, focus, and expertise to meet SaaS providers' emerging needs. You can leverage our global reach, breadth of services, and proven implementations to increase market share and reduce time to market.

Savvis Symphony: Cloud Computing for the Enterprise

In December 2009, Savvis introduced Savvis Symphony, a broad portfolio of dedicated and multi-tenant cloud infrastructure services.

Savvis Symphony builds on Savvis' heritage of delivering cloud and conventional Infrastructure-as-a-Service (IaaS) for enterprises, enabling the deployment of custom configured enterprise cloud services at the click of a mouse, which fit standard enterprise processes and industry best practices. Its capabilities take cloud computing services far beyond the simple application designs, often hampered by limited user controls and into a world of complete cloud provisioning with advanced service design in the portal.

Customers are empowered with easy-to-use tools to provision new instances online as they need them based on short, flexible term commitments. This powerful combination equips your business with the tools to rapidly build, control and customize your hosting environment to support the demands placed on your infrastructure without the burden of long-term contracts or the lead time of traditional deployments.

Savvis Symphony is comprised of the following enterprise services:

- **Savvis Symphony Dedicated** – Dedicated, private cloud infrastructure providing virtualized hosting
- **Savvis Symphony Open** – Multi-tenant, public cloud infrastructure providing secure virtualized hosting
- **Savvis Symphony VPDC (Beta)** – Multi-tenant, public cloud infrastructure providing complete Virtual Private Data Centers with multi-tiered security and Quality of Service (QoS)

Under Savvis Symphony Dedicated and Open, customers are deploying virtualized hosting services for just-in-time infrastructure for the following scenarios:

- Web hosting of e-commerce sites for time-bound promotional campaigns
- On-demand resources for developers needing to test and prototype applications
- Batch processing of marketing or research data analytics
- Enablement of SaaS delivery models to scale rapidly and meet end-user experience expectations
