

FINANCIAL SERVICES

Financial Transaction Service**Connecting the Financial Community**

Your firm requires connectivity to multiple, partners, services and customers. In the past connectivity required a separate connect for each customer, partner or application. Savvis' Financial Transaction Service (FTS) simplifies connectivity so that all clients, business partners, service providers and processes, regardless of location, can function on a single Extranet to streamline their workflow. FTS is designed for today's straight through processing applications. FTS provides a single IT infrastructure for delivering transaction messages worldwide. This same infrastructure can be used to carry additional content and applications such as Depth of Book from leading ECNs (Electronic Communications Networks). Since all applications ride on a common resilient physical infrastructure your connectivity costs are significantly lowered.

A Shared Financial Market Utility

Before Savvis FTS you had two options for connecting to your trading partners: build a private network for each of your sites or route trades to a hub on a common network that may charge costly transaction fees. Private networks can offer superior performance, reliability, and security but use "hard wired" connections to each party requiring long upfront lead times, costly network and security equipment and technical skills to manage. As your trading network grows beyond your organization, costs and complexity rises dramatically. Trading hubs can offer flexibility and lower costs but demand that your applications and data use a shared network raising concerns about security and who's application will receive priority when the network gets too crowded. As your trading traffic increases, your costs continue to rise since many hubs charge per message or transaction fees. Savvis FTS offers you the best of both worlds — the performance, reliability, and security of a private network with the flexibility and cost effectiveness of trading hubs.

Getting Connected

FTS plugs you into a network of thousands of financial institutions instantly through an FTS Gateway. You simply tell Savvis which parties you want to connect to and the bandwidth required, and Savvis FTS handles the rest. All connections are private and you can easily add, resize or remove connections, as your business needs change. And security is built-in, only the originator and the destination ever see each other's message. Best of all you pay only a small flat monthly fee based on bandwidth not trade flow.

The Network that Powers Wall Street

- A secure high performance financial transaction network for delivering your transaction messages, content and applications worldwide.
- Our experience connecting thousands of financial institutions means your trading network is up and running FAST!
- Native support for FIX, FIXML FpML, IPCMS and ISO 15022 messaging protocols.
- Simple pricing model allows for rapid implementation and easy growth.
- Combine with market data feeds, Book or ECN applications, video conferencing, voice over IP, Internet, and more
- Each service or application is guaranteed the security and performance that it needs

An Infrastructure to Grow Your Business

FTS is based on Savvis' award-winning global platform so that you can easily use FTS as part of an end-to-end IT infrastructure for your business. You can combine FTS with other services for financial applications and content such as a Depth of Book, market data or even video conferencing and voice over IP on a single circuit. These applications can be delivered via Savvis award-winning network and Internet service.

About Savvis

Savvis, Inc. (NASDAQ: SVVS) is a global leader in cloud infrastructure and hosted IT solutions for enterprises. More than 2,500 unique customers, including 30 of the top 100 companies in the Fortune 500, use Savvis to reduce capital expense, improve service levels and harness the latest advances in cloud computing.
