Savvis Markets Infrastructure Connectivity

Savvis Markets Infrastructure

Leading financial services organizations — encompassing buy-side, sell-side, liquidity venues and solutions providers — across the globe rely on Savvis Markets Infrastructure as the foundation for their trading and IT solutions.

Savvis' global footprint of data centers and ultra low latency and extremely resilient network connectivity underpins these solutions, reinforced by an unmatched depth of experience in supporting the financial markets.

Connectivity

Market data delivery and interconnectivity between data centers, clients, trading partners and execution venues is achieved by leveraging Savvis' Application Transport Services (ATS):

- Derived from our next generation global network, provides high performance, low-latency, managed connectivity worldwide.
- Highly competitive and flexible commercial model
 - Market data pricing based on port speed and liquidity venue tier
 - Trading connections priced in total bandwidth
- Available bandwidths up to 40 Gig-E and a full range of access options, including Ethernet, clients can scale their connectivity to fit the specific needs of each of their locations.
 - HAN port speeds up to 40Gbps
 - WAN speeds up to 10Gbps
- Greater flexibility via expanded, standardized options
 - Upgrading to state-of-the-art ATS and MX960s in financial centers
 - Continual optimization as new routes are made available
 - CPE Options for both conventional and low-latency applications
 - Multiple, including popular dynamic, routing options

Savvis Mission

To provide value through technology solutions and proactive service to enable enterprises to gain a competitive advantage through IT.

- All clients have access to the award-winning SavvisStation customer web portal
 - Automated quoting and ordering within marketplace
 - Real-time visibility into the utilization and performance of every connection
 - Micro-second granularity of latency and gapping monitoring between individual sources, Savvis data center(s) and customer site(s)
 - Managed and unmanaged latency measurement device options
 - Streamlined provisioning reduces delivery timeframe significantly
 - Unfettered access and complete visibility into all things surrounding their Savvis-managed IT services, from support tickets and invoices to service reports and product orders.

Market Data

Market data is the lifeblood of financial markets and a core component of Savvis Markets Infrastructure. For whatever purpose — price discovery, post-trade processing, portfolio valuation — Savvis offers ultra low latency connectivity to over 200 exchange and liquidity venue feeds across the globe, including:

- BATS
- CME Group
- Direct Edge
- London Stock Exchange
- NASDAQ OMX
- NYSE Euronext
- Singapore Exchange
