

HOSTING SERVICES

Web Middleware Solutions**Simplifying management of complex solutions.**

The middleware applications you deploy between your Web and database servers play a vital role in how the face of your business — your Web servers — connect to the lifeblood of your business: the data contained in your database infrastructure. Middleware applications serve as a conduit for mapping customer-driven requests from your Web servers to data in your database infrastructure. What's more, it allows the Web server to return dynamic Web pages based on the specific requests of your customers.

Managing these critical middleware applications all too often times results in a “best effort” only. Why? Today's IT resources are stretched thin supporting the day-to-day operational challenges faced by your business as well as supporting initiatives tied to generating revenue. They simply don't have the time to prioritize all of the components that go into ensuring your applications are performing optimally.

Savvis can help. We've integrated some of the industry's leading middleware applications to our managed services portfolio. This eliminates the expense and time associated with managing your applications while ensuring service excellence. What's more, we work with our clients to define responsibilities so the management we provide can be customized to your unique business environment.

Websphere Application Server (WAS)

One of the leaders in the application server market, Websphere offers businesses a J2EE compliant platform for assembling, deploying, and managing on-demand Web applications that are part of a service oriented architecture (SOA) environment. Websphere delivers an efficient middleware application solution with a robust set of tools that simplify the administration of your application environment and improve speed to market.

Apache Tomcat

Apache Tomcat offers a streamlined middleware application platform that leverages Java Servlet and JavaServer Pages (JSP) technologies to provide developers with a fast, efficient platform for creating compelling, dynamic Web content. JSP technology enables rapid development of Web-based applications that are both server and platform agnostic. The adoption of Apache Tomcat in the enterprise space along with the community support that comes with open source applications has led this to be included in many other J2EE-compliant products, including the Web container component such as JBoss and Apache Geronimo.

Savvis Managed WebSphere Solution Advantages:

- Asset Management
 - Licensing
 - Patch Updates
 - Service Upgrades
- Installation & Configuration
- Performance Monitoring & Tuning
- Application Management
- Capacity Planning
- Backup and Disaster Recovery

Microsoft .NET

For businesses running the Windows operating system environment, .NET offers an expansive platform for building applications that have visually stunning user experiences, seamless and secure communication, and the ability to model a range of business processes. .NET offers developers a consistent programming model and a common set of application programming interfaces (APIs) and will help your business build applications that work the way you want, in the programming language you prefer, across software, services, and devices.

About Savvis

Savvis, Inc. (NASDAQ:SVVS) is an outsourcing provider of managed computing and network infrastructure for IT applications. By outsourcing to Savvis, enterprises can focus on their core business while Savvis ensures the quality of their IT infrastructure. Leading IT organizations around the world have selected Savvis to help them improve their service levels, reduce capital expense and deal with the rising costs of bandwidth, energy, real estate, staff and expertise. As a pioneer in utility computing, Savvis understands and harnesses the latest advances in technology like virtualization, cloud computing and support process automation.
