

## HOSTING SERVICES

## Dedicated Switching and Services

### Overview

Companies need to focus on their core business competencies, not worry about network switches. The Savvis Dedicated Switching and Services portfolio allows your business to optimize network switching with a dedicated solution. This helps you realize lower Total Cost of Ownership (TCO) with higher availability for mission-critical services.

### Dedicated Switching and Services

The Savvis Dedicated Switching and Services managed hosting portfolio provides a highly available switch or pair of switches — depending on the level of service — that create an exclusive hosting area network (HAN) strictly dedicated to one customer. In conjunction with Dedicated Switching and Services, Savvis offers Virtual Services which deliver server Load Balancing, SSL Acceleration, and Firewall services. Each offering includes all necessary hardware, software, and installation, as well as monitoring and support on a 24/7 basis.

The ideal network switching option for large or small businesses, educational institutions, financial groups, and government agencies, Dedicated Switching and Services are offered in three distinct configurations:

**Dedicated Switch.** Offered with an array of options from individual to stackable, the Dedicated Switch allows customers to increase network performance by managing up to 40 ports per switch.

**Dedicated Aggregation Switch.** This provides an aggregation (DAS) level pair of switches designed to handle applications requiring large bandwidth. The offering accommodates customers with complex Layer 3 routing requirements and a need for dedicated Load Balancing, SSL Acceleration, and Firewall.

**Dedicated Core Switch.** Consisting of a pair of switches at the core level linked to the switches at the DAS layer, this encompasses all core functionality. This offering is perfect for large customers with high port requirements whose data cannot traverse a shared core and whose requirements include dedicated routers and aggregation switches as well as core switches.

### The Savvis Advantage

- **Ease of implementation:** Savvis manages the complete solution, from installation, to configuration, to ongoing management
- **Leading technology:** utilizing established application delivery technology to optimize server performance
- **Experience:** Savvis leverages a staff with deep experience supporting load balancing and SSL acceleration services in managed hosting and colocation environments
- **Monitoring:** on a 24/7 basis

### Features and Customer Benefits

**Failover solution sold in pairs** (dedicated aggregation and core switch): Provides customers with increased uptimes and a high level of service.

**Scalable and flexible:** Fast and easy scalability enables customers to make major changes rapidly and with confidence.

**Extensive monitoring and reporting:** By delivering accessible reports to customers, they can better manage their ongoing business operations and information.

### About Savvis

Savvis, Inc. (NASDAQ:SVVS) is an outsourcing provider of managed computing and network infrastructure for IT applications. By outsourcing to Savvis, enterprises can focus on their core business while Savvis ensures the quality of their IT infrastructure. Leading IT organizations around the world have selected Savvis to help them improve their service levels, reduce capital expense and deal with the rising costs of bandwidth, energy, real estate, staff and expertise. As a pioneer in utility computing, Savvis understands and harnesses the latest advances in technology like virtualization, cloud computing and support process automation.
