

SECURITY SERVICES

Savvis Security Utility Services

Overview

Cyber crime represents one of the most critical threats to businesses today. Attacks are so vast and complex that it has become impossible to detect every incident by hand. These attacks can cause downtime, or can create holes in system security for further breaches, and can eventually lead to financial losses, loss of credibility, or even regulatory compliance breaches. To guard against such attacks and to protect sensitive business information from being compromised, Savvis offers a comprehensive suite of Security Utility Services.

Savvis Security Utility Benefits

Savvis' Security Utility Services benefit your company by providing flexible and scalable managed security offerings that do not require hardware or software to be installed or managed at your premises. The Savvis Security Utility leverages "In The Cloud" security components, such as in-network firewalling, network-based DDoS mitigation and worm attack mitigation for Wide Area Networks (WANs), as well as virtualized security components, such as hosted firewalls and intrusion detection systems. Centrally-managed by Savvis, the utility security services allow for automatic technology refreshes, as new IT threats emerge and security solutions evolve over time.

Additional benefits of the Security Utility services include:

- **Industry Experience:** Savvis' security legacy dates back to 1987, with the formation of the Common Criteria Test Lab (CCTL). As such, more than 50 credentialed security professionals now provide services to our customers, keeping abreast of potential threats, and interfacing with global law enforcement officials. Security is a core competency of the Savvis organization, permitting your company to focus on its core priorities and projects.
- **Reliability:** Savvis' Security Services provide access to an Incident Response (IR) team, which is available on a 24/7 basis, to provide resolution of business-critical security situations. (Incident Response hours are sold in conjunction with the utility services, and are billed separately).
- **Reduced Capital Outlay & Software License Administration:** With Savvis' Security Utility Services, your company does not need to have hardware installed on premises, thus bypassing the traditional hardware acquisition process. Savvis also manages the software licenses that support the utility services, on your behalf. Lastly, Savvis utilizes technology that has been internally tested to deliver performance which meets the service expectations of our customers in the financial, healthcare, government agency, media & entertainment and retail industries.

Advantages

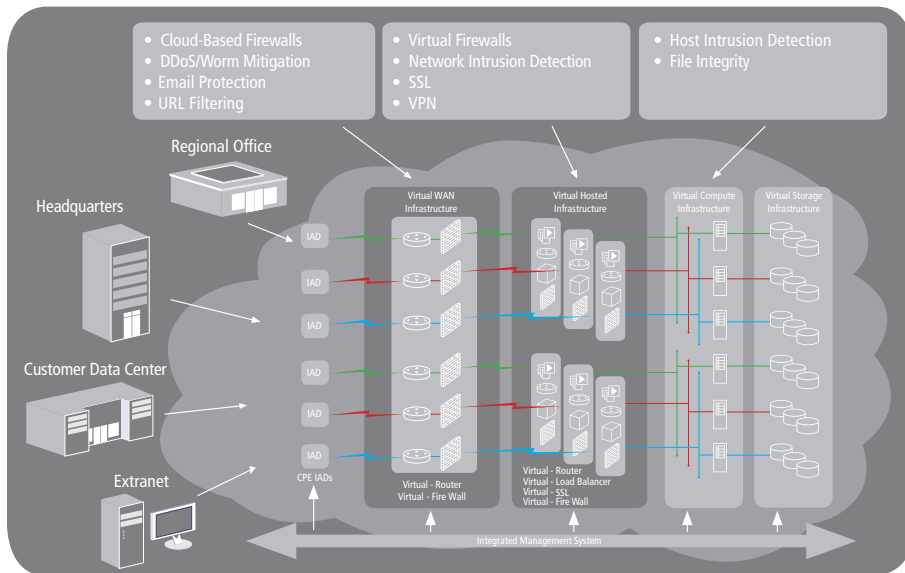

- **Industry Experience:**
A security legacy dating back to 1987, with the formation of a Common Criteria Test Lab (CCTL).
- **Reliability:** Access to a 24/7 Incident Response Team, to provide resolution of business-critical security issues.
- **Reduced Capital Outlay & Software License Administration:**
No hardware needs to be installed at your premises, & software licenses are managed by Savvis.
- **Reporting:** Available through a convenient customer portal.

- **Reporting:** Reporting for the Security Utility Services is generally available through a convenient customer portal. Additional high-level security reports can be provided to your company, upon request.

Savvis' Security Utility Services offer a superior level of protection and value to your company, while being scalable and adaptable to meet your ever-changing security needs. A diagram of the Savvis Security Utility architecture appears below.
